LinkedIn: Lucas Gutknecht

TECHNICAL SKILLS

Languages: SQL, Python, C#, VBA

AWS Cloud Services: Glue (Spark), SNS, SQS, Step Functions, Lambda, API Gateway, IAM, EC2, ECS, ECR

Azure Cloud Services: DataBricks, DataFactory, Storage Containers

CI/CD: GitLab/GitHub, Azure DevOps

ETL Scheduling: Airflow, SSIS, CRON, Cloudwatch Alarms

SUMMARY

Professional Summary

Accomplished Data Engineer with over 7 years of experience, specializing in data architecture, cloud development, and data engineering solutions. My career began in reporting and evolved into a role as a Database Administrator before transitioning to Data Engineering, where I have developed strong expertise. SQL was one of my first programming languages and since then I have been hooked on programming and analytics. I began with SSIS as my primary ETL tool, then expanded my skill set by mastering Python, earning a Python Application Specialist certification through DMACC.

In recent years, I have focused on modern Data Engineering practices, including API development and cloud-based solutions. I have extensive experience working with AWS, leveraging services such as AWS CDK for cloud formation stacks, creating CI/CD pipelines in Git, and deploying applications to the cloud. Additionally, I have supported data science teams, enhancing my skill set with a Data Scientist certification to further strengthen my contributions.

For my current role I have transitioned into a Full Stack Developer, designing and developing front-end web applications using Angular within a MEAN stack environment.

I am driven to continuously expand my technical expertise and stay ahead of industry trends, seeking opportunities to apply my knowledge in Data Engineering and cloud technologies to solve complex business challenges.

WORK EXPERIENCE

Wellmark-Senior Software Engineer

March 2026-Current

- Modernized legacy Angular application by migrating from Angular 12 to Angular 20, resolving breaking changes, updating dependencies and build tooling, and refactoring deprecated APIs to ensure compatibility with the modern Angular ecosystem.
- Collaborated with business stakeholders to understand requirements and translate business needs into front-end solutions, implementing UI enhancements and integrating REST APIs to deliver new and improved application functionality.
- Developed backend API endpoints to retrieve and manage application data, then implemented corresponding front-end functionality to consume, process, and display the data through the user interface.

MidAmerican Energy-Data Engineer

June 2025-March 2026

- Lead small team migrating off legacy ETL/Reporting tool (Celonis) to Azure Cloud resources mainly Data Factory and databricks
- Created Azure Data Factory templates and Databrick scripts that automate ETL jobs that process data incremental and full loads

- Create pipelines in Azure Data Factory that passes parameters to Databricks Notebooks to transform data.
- Create notebooks in Databricks that make a direct connection data source, load into dataframe, and manipulate data using pyspark.
- Architect a system migration from a vendor sourced platform to a Azure services primary using Azure Data Factory and Databricks.

Corteva-Data Engineer

May 2022- June 2025

- Created business application that receives messages from Kafka event messaging services, execute python scripts in AWS Fargate running docker images, write data into RDS database, and expose data via API using API Gateway.
- Implement Data Scientist models in pickle format into ingestion pipeline deployed through AWS ECS.
- Created Python script that multi-thread API calls to speed up execution time using AWS Glue.
- Created ETL scripts in SQL that are orchestrated by Airflow for scheduling.
- Used AWS services for data migration, analysis, and transformation such as Glue, SNS, S3, Lambda, and API Gateway
- Created python scripts to make API calls and write responses to database.
- Created Data Models used for star schemas in the Data Warehouse using Kimball best practices. Transforming data with SQL and Spark DataFrames.
- Manage AWS application roles through IAM using least privileges methodology.

Principal Financial Group-Data Engineer

January 2021-May 2022

- Help create and maintain AWS Cloud Applications that use Lambda, Glue, SNS, SQS, CloudWatch, VPC and s3.
- Create Glue scripts (in Pyspark) to load data frame, transform data using DataFrames or SQL, write to parquet file, and query in Athena.
- Write Lambdas and Glue scripts in Python to transfer events for data orchestrated with Boto3 commands.
- Create and Maintain CDK templates to deploy AWS resources using Infrastructure as code methodologies.

CDS Global-Data Engineer

March 2020-January 2021

- Make API calls using Python to clients or AWS (Boto3), parse JSON response, insert into database.
- Convert SSIS to use AWS architecture (S3 files, RDS, AWS CLI)
- Write SQL queries to analyze data sets based on business leaders' requests.

Hy-Vee-Data Engineer

September 2019-March 2020

- Create stored procedures using TSQL/SQL in SSMS to manipulate data for ETL.
- Write Python script to make API call to vendor's site that truncates table before sending file to load.
- Write Python script to connect to SQL Server, select data into a data frame, export to CSV, and SFTP file.
- Create windows form inserts, updates, deletes to database using event driven buttons wrote in C # on .net framework.
- Use SSIS to manage/create packages deployed to SSMS through Integration Services Catalogue scheduled on jobs.

Casey's Corporate- Data Engineer

January 2019-September 2019

- Create packages in SSIS to transform data and load into the Data Warehouse on Microsoft APS.
- Create stored procedures using SQL that are called by SSIS and use dataflow objects to transform the data.
- Schedule jobs in SSIS calling Visual Studio projects to load the Data Warehouse.

- Create ETL processes that are modelled off Kimball's Dimension and Fact ideology including slowly changing dimensions implemented via SQL.

CDS Global- Database Administrator

May 2018-January 2019

- Migrate SQL Server Database to AWS RDS using AWS Schema Conversion tool and AWS Database Migration
- Set up a 3-node cluster using Amazon EC2 instances and configure the XML files with the correct IP Addresses
- Create stored procedures with SQL automated by scheduled events that scrubs data provided by clients.
- Move, Remove, Copy, and schedule jobs with Crontab on Linux using Putty.

Athene-Product Analyst

May 2016- May 2018

- Write SQL in an excel worksheet that is passed to an Oracle DataFrames to pull rates and product features on annuities.
- Automate system processes that are periodic using VBA in excel to generate values used in sales materials.
- Create weekly reports aggregating data highlighting trends that are used for sales analysis in Business Objects
- Create tools in Excel that are form driven written in VBA to calculate values for an annuity based on user inputs.

EDUCATION

Professional Certifications

Microsoft Azure Data Fundamentals: July 2025

Microsoft Azure Fundamentals: July 2025

Data Science Certification

Des Moines Area Community College

Graduation Date: May 2024

Python Application Developer Certification

Des Moines Area Community College

Graduation Date: May 2022

Database Management Specialist

Des Moines Area Community College

Graduation Date: May 2015

Bachelor of Science in Business Administration, Major: Marketing

Drake University, Des Moines, IA

Graduation Date: May 2009
